Brilliance® Precision Installation Kit

Brilliance Universal connectors can be terminated with no specialized tools, making them an excellent choice for field terminating fiber. The unique no-crimp installation means connectors may be re-terminated up to five times, even after testing, which helps to improve efficiency and eliminate costly connector waste. The installation process is simplified even more by eliminating the need for any epoxy or polishing. This installation kit includes everything you'll need to terminate the Brilliance connectors onto fiber cable.

Brilliance Precision Installation Kit Contents

Part Number: AX104271
