

Secure your operations

with certified solutions

Protecting mission-critical services requires solutions that meet the highest security standards. There's no room for compromise.

As a result of the digitization, industrial plant operators, energy companies and mass transit authorities prioritize their critical infrastructures to address new compliance requirements as well as the evolving regulations. In response, their demand for certified products increases.

Over the next several months, Belden is taking a phased approach to certify its HiOS (Hirschmann Operating System) Industrial Ethernet Switches to comply with IEC 62443-4-2 Security Level 2 functional requirements. This IEC standard addresses security in industrial automation and control systems.

Validated by a qualified and independent third party, certification confirms that Belden solutions are designed using a secure product development lifecycle framework.

Belden's certified products:

- Incorporate robust security measures
- Minimize vulnerabilities
- Meet requirements through rigorous security testing
- Reduce exposure to cyber threats
- Can be retired securely at end-of-life

This certification establishes Belden as your trusted partner in seamlessly, securely integrating network devices.

Certified products include:

- Hirschmann BOBCAT Switches

Connect to what's possible.

About Belden

Belden Inc. delivers complete connection solutions that unlock untold possibilities for our customers, their customers and the world. We advance ideas and technologies that enable a safer, smarter and more prosperous future. Throughout our 120+ year history we have evolved as a company, but our purpose remains – making connections. By connecting people, information and ideas, we make it possible. We are headquartered in St. Louis and have manufacturing capabilities in North America, Europe, Asia and Africa.
