

LioN-Power IO-Link System

Multiprotocol IO-Link Masters and IO-Link Hubs

The LioN-Power IO-Link system combines powerful I/O modules in different variations which enable intelligent communication between sensors and actuators in industrial environments through standardized IO-Link technology.

-  **Reduced machine costs** in comparison to traditional fieldbus connections due to efficient combination of IO-Link Master and IO-Link Hubs which allow processing up to 132 I/O signals.
-  **Ensuring the production process** by maximizing machine availability with NEW S2 redundancy feature within LioN-Power IO-Link Master.
-  **Extended portfolio** offering **extreme temperature operation** as low as -40°C through the new Extended Environmental Conditions (EEC) line.

Key Features

- S2 redundancy
- LioN-Power IO-Link portfolio with IO-Link Masters and IO-Link Hubs in many variations
- 8-port IO-Link Masters in 30 mm and 60 mm housing with M8 and M12 I/O connection
- Port variations: 4 Class A and 4 Class B with galvanic isolated power supply
- IO-Link Device Tool of TMG enables easy device configuration and provides full IODD support
- PROFINET V2.3 (CC-C), Netload Class II, FSU, MRP, Shared Device
- EtherNet/IP according to CIP edition V3.11, EIP adaption of CIP V1.12, DLR, Quick Connect
- Developed for harsh conditions – IP65, IP67, IP69K-rated tolerances for mechanical stress
- IO-Link Hubs available in 16DI, 10DI 6DO and 16DIO with M12 Power connection

Multi-PROTOCOL

Our IO-Link system helps ensure consistent, intelligent communication between the enterprise resource planning (ERP) level and sensor level, needed for Industry 4.0/IIoT environments. Choose from many IO-Link devices and variations for flexible, cost-efficient automation.

Be certain.
Belden.

LioN-Power IO-Link Master

Versatility through multiprotocol function

IO-Link Masters guarantee efficient and reliable communication between control and sensor/actuator level by adopting a gateway function between Ethernet and IO-Link. The **world's first IO-Link Masters providing multiprotocol support** for PROFINET and EtherNet/IP in combination with the new M12 Power L-coded power supply connection offer a major step forward in the miniaturization and future-proofing for intelligent industrial connectivity.

Masters are available in standard **60mm and ultra-compact 30 mm housings** and have eight IO-Link ports (four Class A and four Class B ports). On each IO-Link Master for both port classes, Pin 1 and Pin 3 are fixed for power supply connections for IO-Link devices. Pin 4 is configurable and can be used either for an IO-Link signal, a digital input or a digital output.

IO-Link Class A Ports (X1-X4) are best suited for sensors because next to the usual Pin 4 (IO-Link communication) they have an additional hardwired digital input channel on Pin 2. This allows the collection of two different signals per port by using e.g. a T-junction.

IO-Link Class B Ports (X5-X8) provide **additional galvanically isolated power supplies** on Pin 2 and 5 for the connection of IO-Link devices that have increased power needs, such as IO-Link valve terminal.

S2 redundancy

Increase your machine availability

S2 redundancy is a mechanism based on the Profinet signal transmission which allows that the IO-Link Master LioN-P is connected to two different controllers. This enables to transmit sensor & actuator signals from the field level to two redundant Profinet controllers and leads to an increased reliability of applications in e.g. pharmaceutical industry.

Avoid an undefined status when your machine lost the communication to the primary PLC by switching to a synchronized backup PLC automatically. This Profinet system redundancy functionality is mainly required in the pharmaceutical industry where a stop of the production process would generate dramatically high costs.

One Standard Connector, One Bus Address

The **IO-Link systems leads to added operational efficiency** due to the fact that only one bus address for the IO-Link Master is needed. You can easily connect up to 8 further IO-Link Hubs to one IO-Link Master via standard M12 A-coded connectors and using an unshielded cable up to 20m.

The **IO-Link Hubs are IO-Link devices and do not require a separate bus address** which enormously reduces the amount of needed bus addresses inside the network.

EEC - Extended Environmental Conditions

The IO-Link System for Extreme Temperature Conditions

The introduction of the **EEC-Line** (Extended Environmental Conditions) makes the entire LioN-Power IO-Link system from Lumberg Automation suitable **for operation in temperatures as low as -40°C**. This performance feature considerably extends the range of use of the LioN-Power IO-Link Master and IO-Link Hubs to applications in harsh environmental conditions. These include wind turbine plants or deep-freeze warehouses.

Markets

The LioN-Power IO-Link Masters and IO-Link Hub can withstand harsh operating environments across all industrial sections with ingress protection up to IP69K and welding spark-resistant housings. This includes manufacturing, robotics, material handling, intralogistics and machine building, as well as transportation, wind power applications and wastewater treatment plants.

LioN Management Suite Software

With the LioN Management Suite, the free software tool from Belden, several LioN-P devices in your network can receive **automated firmware updates, securely and efficiently**. The LioN Management Suite recognizes connected devices and transfers the new firmware file to any number of devices simultaneously. This process completely eliminates the need

PX0 - Parameterization = 0

The IO-Link System without any parameterization effort

"Out of the box and ready for use", the **PX0 IO-Link Hub Line** is mainly focused on end users and enables quick and easy device replacement in the IO-Link system based on the combination of IO-Link Master and IO-Link Hubs. Due to the **pre-configuration of the PX0 IO-Link Hubs**, maintenance effort is reduced to almost zero, a clear advantage in terms of reducing maintenance costs.

for time-consuming connection between individual devices and the software tool, common for many other manufacturers. Furthermore, the LioN Management Suite can also be helpful for **initial system implementation**. An IP address range is pre-defined in the tool, so any Ethernet devices found are automatically assigned to a correct, valid IP address range.

TMG IO-Link Device Tool

To configure your IO-Link devices, you can use one of the most popular and easy-to-use IO-Link software tools on the market – **TMG TE's IO-Link Device Tool**. This tool allows you to load and store IO Device Description (IODD) files for your IO-Link devices. It can be used as a standalone program, or integrated through a Tool Calling Interface (TCI) found in PLC engineering tools, such as STEP 7 or TIA Portal.

Main Features:

- Operation and configuration of IO-Link devices via IODD
- Support for IO-Link V1.1
- Port configuration of IO-Link Masters without a connected controller
- Direct access to IO-Link device data (process, identification, diagnostic and parameter)

Additional benefits of the IO-Link Device Tool include the ability to **quickly, easily and reliably change parameter or IO-Link**

devices and to reduce overall machine costs. **LioN-Power IO-Link Masters are designed to work seamlessly with Version 5 of the TMG TE IO-Link Device Tool.**

TMG TE IO-Link Device Tool

With its user-friendly graphical interface for port configuration and device parameterization, you can intuitively configure IO-Link devices without any PLC programming or having to study the device's data sheets. For more information on the TMG TE IO-Link Device Tool, visit www.tmgte.com

Technical Information IO-Link Master

Type	NEW 4DI 4DO 8IOL 	4DI 8IOL 	4DI 8IOL 
			
Order Designation	0980 ESL 399-121 ¹⁾ -(EEC)	0980 ESL 199-121	0980 ESL 199-122
Order Designation	0980 ESL 399-121-S2		
Product Description	LioN-P, IO-Link Master, PROFINET or Multiprotocol (PROFINET and EtherNet/IP), industrial metal housing, 60 mm, up to IP69K, 4 digital input and 4 digital output channels (2 A) with galvanic isolation and 8 IO-Link Master, 8 x M12 A-coded I/O connection, 5-poles, 2 x M12 D-coded bus connection, 4-poles, 2 x M12 L-coded power supply connection, 5-poles	LioN-P, IO-Link Master, PROFINET or Multiprotocol (PROFINET and EtherNet/IP), industrial metal housing, 30 mm, up to IP69K, 4 digital input and 8 IO-Link Master, 8 x M12 A-coded I/O connection, 5-poles, 2 x M12 D-coded bus connection, 4-poles, 2 x M12 L-coded power supply connection, 5-poles	LioN-P, IO-Link Master, PROFINET or Multiprotocol (PROFINET and EtherNet/IP), industrial metal housing, 30 mm, up to IP69K, 4 digital input and 8 IO-Link Master, 8 x M8 B-coded I/O connection, 5-poles, 2 x M12 D-coded bus connection, 4-poles, 2 x M12 L-coded power supply connection, 5-poles

General Data			
Housing	Metal, zinc die-cast, potted		
Dimensions (W x H x D)	60 mm x 31 mm x 200 mm	30 mm x 43 mm x 225 mm	30 mm x 43 mm x 204 mm
Weight	ca. 500 g	ca. 480 g	ca. 450 g
Ambient Temperature	-20 °C to +70 °C (Operation)/-40 °C to +70 °C for all EEC ²⁾ modules		
Protection Degree	IP65, IP67, IP69K ³⁾		
Shock/Vibration	50 g/15 g		

Power Supply		1
Nominal Voltage	24 V DC (18 to 30 V DC)	
Connection	2 x M12, L-coded, 5-poles, up to 2 x 16 A	
Current Consumption	typ. 180 mA (at 24 V DC)	

IO-Link Master	
IO-Link Specification	V1.1.2 (COM 1, COM 2, COM 3)
IO-Link Class A Ports	4 x (X1 to X4)
IO-Link Class B Ports	4 x (X5 to X8)
Nominal Current C/Q (Pin 4)	500 mA
Nominal Current 1L+ (Pin 1)	500 mA
Nominal Current 2L+ (Pin 2)	max. 2 A per Port max. 4 A per Module

Bus System		2
Protocol	Multiprotocol (PROFINET or EtherNet/IP)	
Connection	2 x M12, D-coded, 4-poles	
PROFINET Features	PROFINET V2.3 (CC-C), Netload Class II, FSU, MRP, Shared Device, S2 redundancy	
EtherNet/IP Features	EtherNet/IP acc. to CIP Edition V3.11, EIP Adaption of CIP V1.12, DLR	

I/O Channels		
I/O Function	4 digital inputs, 4 digital outputs and 8 IO-Link Master (configurable as DI, DO, IOL)	4 digital inputs and 8 IO-Link Master (configurable as DI, DO, IOL)
Connection	8 x M12, A-coded, 5-poles	8 x M8, B-coded, 5-poles
Digital Input Channels	max. 12 (4 x Pin 2 (Class A) and 8 x configurable via Pin 4)	
DI Channel Type	Type 1 acc. To IEC 61131-2, PNP	
Sensor Current Supply	max. 500 mA per port	
DO Output Current	max. 500 mA per channel via C/Q, max. 2 A per channel via 2L+ (Pin 2)	max. 500 mA per channel via C/Q
Galv. Isolated Outputs	Yes, 2L+ (Pin 2) outputs	No
Protective Circuit	Electronically: Overload and short-circuit protection	

¹⁾ Also available as: 0980 ESL 3x8-121 – With extra decoupling of Pin 2L+/Uaux with series diode against power feedback from L+ for maximum security.

Nominal current of 2L+ (Pin 2) is limited to 1.6 A due to protective circuit.

²⁾ EEC - Extended Environmental Conditions (Operating Temperature -40 °C to +70 °C).

³⁾ Only if mounted and locked and in combination with Hirschmann/Lumberg Automation connector.

We reserve the right to make technical changes.

About Belden

Belden Inc., a global leader in high quality, end-to-end signal transmission solutions, delivers a comprehensive product portfolio designed to meet the mission-critical network infrastructure needs of industrial, enterprise and broadcast markets. With innovative solutions targeted at reliable and secure transmission of rapidly growing amounts of data, audio and video needed for today's applications, Belden is at the center of the global transformation to a connected world. Founded in 1902, the company is headquartered in St. Louis, USA, and has manufacturing capabilities in North and South America, Europe and Asia.

For more information, visit us at www.belden.com
