

Top reasons Warehouse 4.0 pilots fail to scale

Infographic

1 Proof of value missing in action

- Many pilots are designed as quick technology fixes and neglect the root cause of larger issues.

2 New adventures of old machines

- Warehouse equipment is often decades old, with “patched-in” point solutions that lead to siloed systems and additional risk.

3 Data everywhere (except where it needs to be)

- Connected machines produce a deluge of data, while disconnected ones generate unused information.

4 Exclusive pilot party guest list

- Engaging employees is vital at every pilot stage; yet many pilots are deployed without involving the people impacted by them.

➤➤➤ **Don't let your pilot stall.**

Our **white paper reveals 4 proven strategies** to **navigate these pitfalls** and **achieve scalability**.
