Data Center Training

Course Descriptions

Level 1: Data Center Essentials

This training helps ICT professionals build a solid foundation of data center knowledge they can rely on to successfully manage data center projects. Belden's data center specialists share what they know about the characteristics that make data center projects unique, as well as the intricacies of handling projects correctly from start to finish.

Level 2: Data Center Design Considerations

Focused on systems and products, that when deployed properly, provide solutions to customer problems. Provides a detailed approach to designing the right Belden products into environments to achieve outcomes outlined in the "Project Planning" segment in Level 1, highlighting how to design, plan for and implement Belden's stickiest and most differentiating products.

In the Data Center Trainings, you will build a solid foundation of data center knowledge that you can rely on to successfully manage data center projects from start to finish and focus on systems and products from Belden, that when deployed properly, provide solutions to your customers problems.
